

Pro™ C7200s & Pro™ C7200sx (CMYK) Integrated Qualified Media List

The Pro C7200s & Pro C 7200sx Media List contains a list of tested media for the Pro C7200s & Pro C7200sx models. This document will be updated regularly to reflect the most current media test results. Machines used for testing were maintained within specifications defined by Ricoh. Reliability is dependent on the operating environment in use and the application mix being implemented. In the event of high use of heavy weight or specialty media types, machine reliability may be affected.

**Integrated
Qualified
Media
List
Rev 1**

Tested Media

This list contains media that has been evaluated on the Pro C7200s & C7200sx for image quality and performance.

The media evaluation testing protocol considered the following factors; image quality, fusability, feed performance, and other measures to determine the qualification of the tested media:

Image quality - Image quality using standard test targets

Fusability - Abrasion resistance, consistent image output during printing

Feed Performance - Paper feed reliability, e.g. paper jam, no feed, double feed, skew, etc.

Other - Any other quality issue, e.g. Adhesion, dirty image at the edge of paper, etc.

Based on the test results for the above measures, the quality is shown in the column "Overall".

Definitions of test results, Ratings:

A: Good results.

B: Outside Ricoh Specifications but results may still be acceptable for certain applications.

Note:

1. Ricoh recommends the tested media rated A in the column entitled "Overall". *
2. Media in the B** category may require specific operational settings (e.g. use short edge feed, 100 sheets maximum in the tray, etc.) to ensure optimum image quality and media performance.

In addition there may be specific engine and media settings that should be used in order to optimise the image quality.

Media Settings:

In order to optimise the image quality and engine performance, the correct media settings should be used. The paper library function on the Pro C7200s & C7200sx contains specific data for the qualified media listed in this document, this function also allows users to easily configure the correct settings for other media that maybe required for use.

Ricoh service should be consulted for any issues that may occur with media.

*This applies to normal operating environments only.

**Customers are advised to consult Ricoh service prior to using this media.

Media Type Glossary

The main paper types and their differences are explained below.

Coated Paper

Layers of coating are applied to the paper or board, usually of china clay. This acts as a 'filler' and improves surface.

Cast Coated

The highest gloss finish available, achieved by calendaring the freshly coated paper or board, to create a mirror like quality on its surface.

Gloss Coated

Multiple coating, resulting in a high sheen.

Matt, Silk, Velvet Coated

A lighter coating, resulting in a smooth, non glossy finish that retains its suitability for sharp colour reproduction.

Uncoated Paper

- Uncoated** Ideal for producing a creative effect, as printing onto uncoated material results in a darkening or dulling of the ink's natural colour.
- Laid** A soft, porous paper with a ribbed appearance. It is ideal for traditional stationery.
- Wove** Paper with a smooth, soft surface without visible laid lines. Also referred to as Bond. Ideal for laser printing.
- Kraft** Strong paper made from bleached or unbleached pulp, mainly used for wrapping and packaging.
- Carbonless** Consists of two or more sheets. The underside of the top sheet is coated with a colourless dye in gelatine.
- Newsprint** A low grade paper intended for the printing of newspapers, produced from a mixture of mechanical softwood pulp and recycled fibres. Usually sold on reels.
- Bible Paper** Very thin printing paper with good opacity. Used when many pages are required with an overall low volume, such as for bibles or dictionaries.
- Watermark** Paper with a deliberate design or pattern that is visible when viewed against the light. Popular for traditional stationery, for security reasons and to promote brands.
- Translucent** Paper with very low opacity, allowing light to pass through, depending on the thickness of the sheet. Commonly used by architectural practices as an overlay sheet.

Warranty disclaimer

Ricoh makes no guarantees or warranties, either expressed or implied, concerning the performance or use of media substrates specified in this list.

End users are advised to contact their paper distributor or manufacturer regarding media guarantees.

It should be noted that the quality and consistency of media can vary from ream to ream or carton to carton. Media quality and consistency can also vary if it is stored in conditions outside of TAPPI 402/ISO187 conditions
